

MXB2026-Sylhet-Fakibazz-Master-Moshai

Please test our beginner app. This is the **first stage** of the application and **not the final version**.

Click the link below and open it in **Microsoft Edge** or **Google Chrome**.

Then, click on the **three-dot (:)** menu, select “**Add to Home Screen**”, and tap **Install**.

The application will then be installed on your device.

Project Overview

Project Name: Master-Moshai — The AI Learning Companion

Problem Statement

Bangladesh is home to millions of students, yet access to quality education remains deeply unequal. As a developing country, **financial constraints significantly influence educational opportunities**, especially at the secondary, higher secondary, and admission levels. The rising cost of education creates a gap where talent alone is not enough—economic background often determines success.

In many regions, students lack access to qualified teachers, and even where teachers are available, effective knowledge delivery is not guaranteed. As a result, students frequently develop **fear, anxiety, and long-term aversion toward certain subjects**, leading to poor academic performance and high dropout rates.

Although digital platforms such as YouTube provide educational content, students lack **structured practice, personalized feedback, and clear learning direction**. Many struggle to identify their weak areas or decide what to study next. Repeated academic failure gradually leads to frustration, loss of confidence, and emotional distress.

In extreme cases, academic pressure combined with financial hardship results in serious **mental health challenges**, including hopelessness, isolation, and thoughts of self-harm. This makes it clear that the education crisis is not only academic or economic—it is also a **mental health issue that requires urgent and thoughtful intervention**.

Target Users

- SSC and HSC students
- University admission candidates
- Students from underprivileged and rural communities

Why the Problem Matters

Local Impact (Bangladesh)

- Unequal access to quality education
- Heavy dependence on expensive coaching centers
- Lack of personalized academic guidance
- Increasing mental health stress among students

Scalable & Global Impact

- Similar challenges exist across many developing countries
- Personalized education remains costly and inaccessible
- AI-driven solutions can scale guidance without increasing cost

Vision

Education is a **fundamental human right** and should be free, inclusive, and accessible to all.

Master-Moshai aims to ensure that **no student is left behind due to lack of money, guidance, or emotional support.**
